

iONiX

A blue Volkswagen iONiX electric car is parked at a charging station, plugged into a charging cable. The car is positioned in the center of the frame, facing slightly to the right. The charging station is a black unit with a charging cable attached. In the background, another white car is also plugged into a charging station. The scene is set in a modern, industrial-style building with a concrete floor and walls. The lighting is bright and even.

FULL.
RANGE.
POWER.

Electric charging never
looked so good.

Simple. Powerful. Effortless.

Yes, your charging station should deliver a lightning-fast recharge. But it's time to ask for more. Materials of the highest quality, effortless payment and a design that goes far beyond pure functionality.

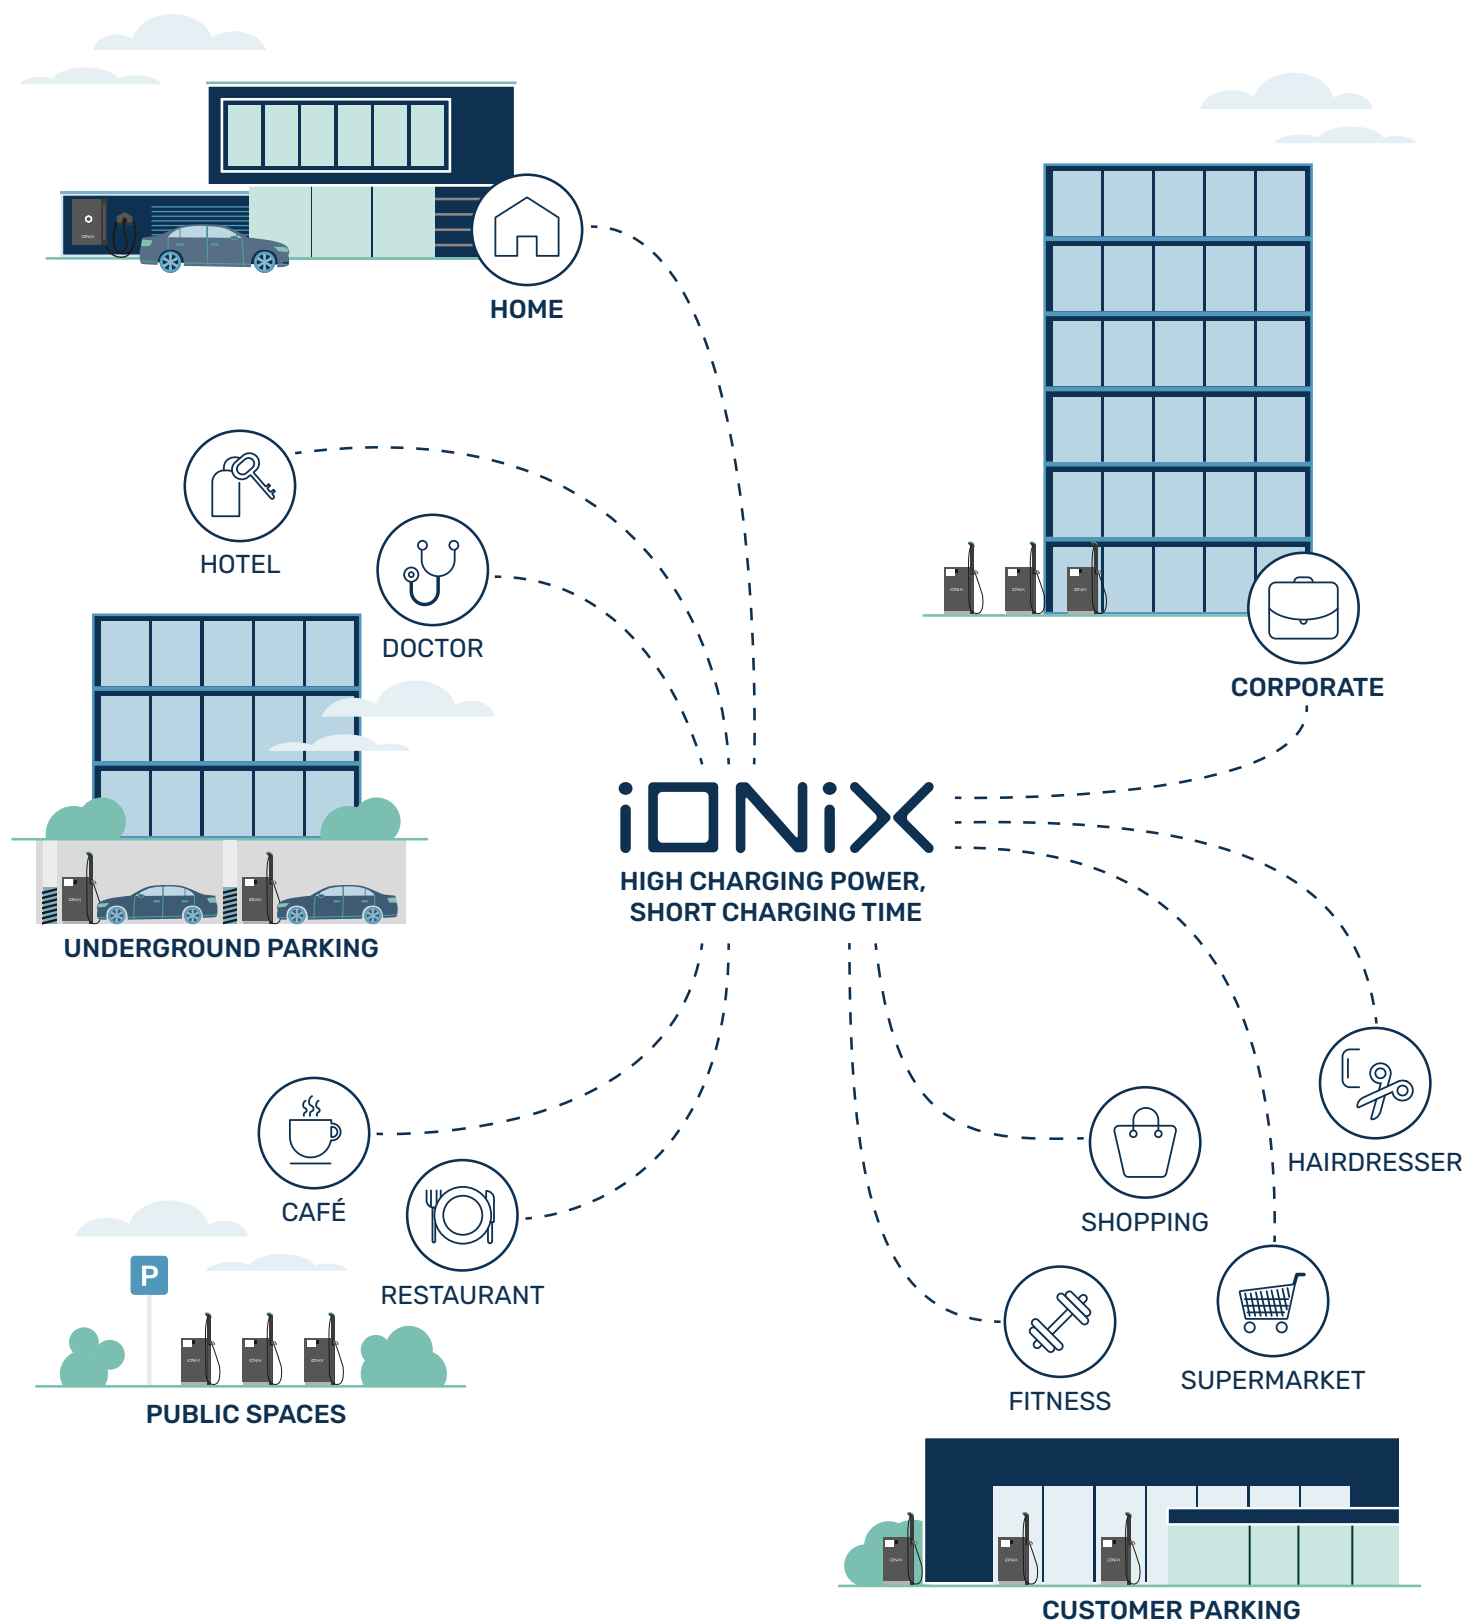

A charging station that is intuitive, simple and intelligent.

A charging station that fits to your way of life.

An iONiX.

iONiX in action

Benefits

Attractive

- captivating design – impressive price

Bidirectional

- vehicle-to-home
- vehicle-to-grid

Bespoke

- brand labelling
- customised design

Calibrated

- no calibration required to install

Payment

- giro-e, credit card
- mobile payment

Made in Germany

- meets "eichrecht" standards
- reliable
- Charging Station Ordinance ready

Fast

- fast to find – fast to charge: 100 km in 20 min at 50 kW

Quiet

- neighbourhood friendly

Easy to assemble

- no crane necessary
- installation as a 1 or 2-man job

Advertising & media

- large display screens
- online configuration

Touch screen

- first charging station with approved 10 inch touch screen

Smart home

- bidirectional charging vehicle-to-home
- networkable with photovoltaic system

Charging park

- integrated dynamic / static load management
- compatible with all Bender controllers
- no superordinate system necessary

Load management and networkability

- with already existing charging stations (Bender inside)

Future ready

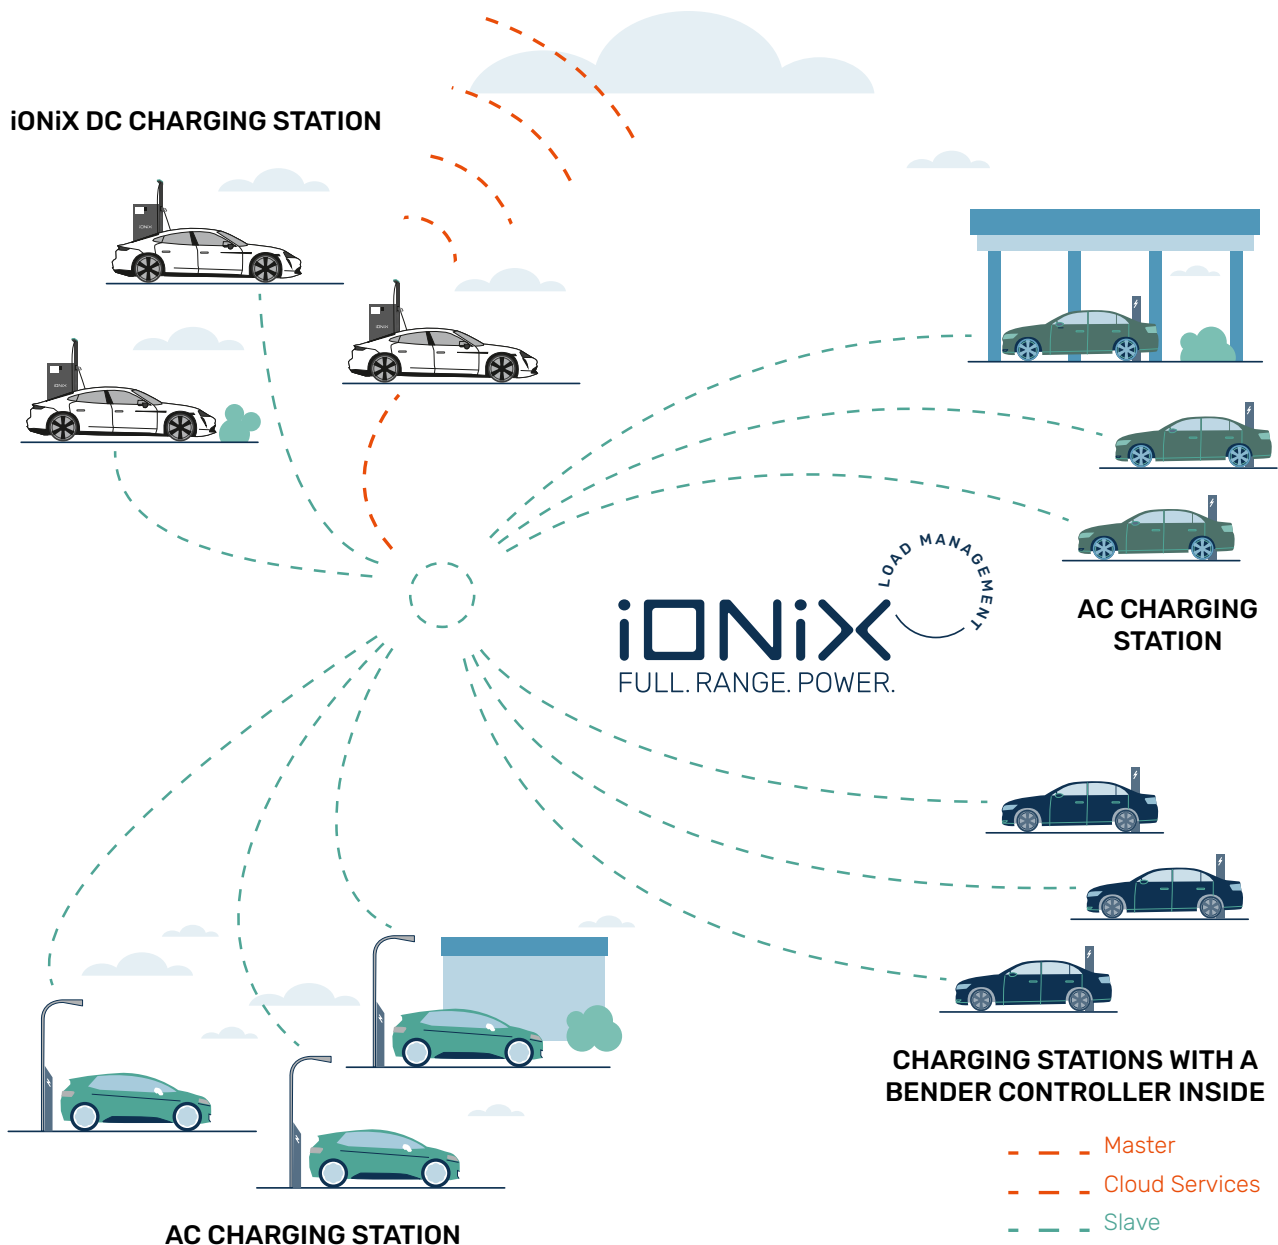

- plug & charge (ISO 15118)
- over-the-air updates
- continuous software development

It's all about dynamic load management.

Are you developing a future-ready charging park with a broad range of AC and DC charging stations available?

iONiX has the dynamic load management system you need.

Fully integrated, it offers simple and standardised connectivity between all iONiX products and all AC charge points / wallboxes fitted with a Bender controller inside. The specific combination, design and possible expansion plans are all up to you.

Nothing else will
ever be enough.

iONiX is a brand of Bender Group and Silver Atena.
